of Tanzania

NOS National Occupational Standards

TET Technical Education and Training

TVET Technical and Vocational Education and Training

GLOSSARY OF TERMS

Circumstantial

Knowledge:

Detailed knowledge, which allows the decision-making in regard to

different circumstances and cross cutting issues.

Competence: The ability to use knowledge, understanding, practical, and thinking

skills to perform effectively to the workplace standards required in

employment.

Competency: A description of the ability one possesses when able to perform a given

occupational task effectively and efficiently.

Competency-based

Education:

An instructional programme that derives its content from validated tasks

and bases assessment on the learner's performance.

Curriculum: A description or composite of statements about "what is to be learned"

by the trainee/student in a particular instructional programme; a product

that states the "intended learning outcomes".

Educational/Training

Programme:

The complete curriculum and instruction (what and how) that is

designed to prepare a person for employment in a job or other particular

performance situation.

Occupation: A specific position requiring the performance of specific tasks –

essentially the same tasks are performed by all employees having the

same title. (Example: baker)

Occupational Area: This is a broad grouping of related jobs. (Example: food service)

Occupational

Competence:

The application of knowledge and skills that consistently meet the

standards required by the work context.

Occupational

Standards:

Specific requirements of competences people are expected to

demonstrate in a particular occupational area, including knowledge and relevant attitudes. They also act as a performance tool of assessment of

the prescribed outcomes.

Occupational/Job

Analysis:

A process used to identify the tasks that are important to employees in

any given occupation.

Performance

Criteria:

Indicate expected end results or outcomes in the form of evaluative

statements.

Skills: The ability to perform occupational tasks with a high degree of

proficiency within a given occupation. Skill is conceived of as a composite of three completely interdependent components: cognitive,

affective, and psychomotor.

Standards: A set of statements, which if proved true under working conditions,

means that an individual is meeting an expected level and type of

performance.

Task Analysis: The process of analysing each task to determine the steps, circumstantial

knowledge, attitudes, performance standards, tools and materials needed, as well as safety concerns required for the employees

performing it.

Task: A work activity that has a definite beginning and ending, is observable

or measurable, and consists of two or more definite steps that leads to a

product, service, or decision.

Underpinning Knowledge:

Crucial knowledge that an individual must acquire in order to demonstrate competences that are associated in performing a given task.

Verification Process: The process of having experts review and confirm the importance of the

task (competency) statements identified through occupational analysis. Other questions, such as the degree of task learning difficulty are also frequently asked. This process is also sometimes referred to as

validation.

1.0. INTRODUCTION

Technical Education and Training (TET) is one of the most important education sub-sectors in Tanzania, responsible for developing a skilled workforce to support the country's industrialization economic agenda. Tanzania's *Development Vision 2025* intends to raise the country's economy to a middle-income status, with a high level of human development. This requires a skilled workforce that is aligned with the needs of the public and private sectors of the economy. The National Council for Technical and Vocational Education and Training (NACTVET) has begun the job of drafting Occupational Standards (OS) that will eventually be adopted as National Occupational Standards (NOS) for use in the delivery of TET that meets the needs of the labour market and the country's economic agenda.

Occupational Standards (OS) are performance criteria that are matched with labour market demands. Each of them describes the functions, performance standards, and understanding or knowledge underpinning a given occupation. They combine skills, knowledge, and attitudes to describe best practice. They are useful tools for establishing job roles, personnel recruitment, supervision, and appraisal, as well as TET Standards. They are also helpful for benchmarking and harmonizing job qualifications on a national and international level. Standards, in general, provide a solid framework for high-quality TET that is labour market-relevant, current, and consistent in application across all public and private institutions.

However, it must be noted that Occupational Standards are different from Training /Education Standards. Occupational standards are defined in terms of activities performed by a person in a selected occupation (e.g., an electrical engineer designs electrical circuits, performs troubleshooting in electrical circuits, etc.), and are usually defined by Employers following procedures as agreed upon by all the stakeholders. On the other hand, Training and Education Standards are developed from the activities defined in the occupational standards, and they specify learning objectives to ensure that the necessary skills and knowledge are developed by a person to enable him/her to function at an agreed level in an occupation. Training and Education Standards are used to define curricula in training institutions. It is critical, however, to establish a direct link between the occupational standards and the training standards for both of them to respond collaboratively to the demands of the labour market.

For the purpose of TET delivery, Tanzania has adopted the Competence Based Education and Training (CBET) approach. The CBET approach focuses on providing learners with the skills and knowledge required to meet the occupational standards. Occupational standards are thus the starting point for developing competency-based training (CBET) programmes. Therefore, it is quite pertinent

for TET institutions to use the relevant occupational standards as a benchmark for formulating their curricula.

Occupational Standards are developed based on a given occupation's current and future demands. As a result, they serve as a means of bridging the gap between the worlds of employment and technical education and training.

The document explains how the occupational standards were developed, as well as the scope, the occupational profile in the form of DACUM charts, and the Occupational Standards.

2.0. OCCUPATIONAL STANDARD DEVELOPMENT PROCESS

The process of developing these Occupational Standards involved both local and international expertise. The process began with an examination of major documents that guide Tanzanian skills development including the 10-year National Skills Development Strategy (2016-2026). NACTVET labour market reports were also used in the literature review to determine the skills demand in the Tanzanian labour market as a whole.

After the literature review, a team of experts in consultation with practitioners developed draft occupational standards. The draft document was used to develop an occupational profile for each occupation (DACUM Chart), which is attached as an **Appendix** to every Occupational Standard.

The occupational standards were validated during the stakeholders' forum held on 22nd and 23rd February 2024 at Morogoro. The information from the stakeholders' forum provides insight from the workplace, professional bodies, regulatory bodies and sector ministries regarding trends and changes in the profession, including how well graduates are prepared for working in the occupation.

3.0. THE SCOPE AND OVERVIEW OF THE OCCUPATION STANDARDS FOR ARCHITECTURAL ENGINEERING TECHNICIANS

The standards cover a broad range of duties and tasks that can be performed by an Architectural Engineering Technician. However, the occupational standards are not meant to replace individual job descriptions. Instead, they are to be used for guidance in defining skill levels and knowledge for the technician in specific settings or positions. The Architectural Engineering Technician may perform tasks in a number of key areas of the occupational standards, but not necessarily in all areas. For example, in large operations, other individuals may be employed or designated to perform specific tasks.

The Architectural Engineering Technician shall work under the supervision of licensed architectural engineers. They can assist in the design of simple infrastructure of architectural engineering and provide information for the preparation of tender documents. Infrastructure may include buildings, bridges, highways, railroads, seaports, airports, canals, dams, water and wastewater systems,

pipelines, waste disposal and recycling. These technicians also play an important role in the construction industry, working on tasks ranging from site assessment to quality control and problem solving during the construction phase. They also conduct site and laboratory tests. Generally, the Architectural Engineering Technician performs the following responsibilities:

- a) Site and laboratory tests of architectural engineering materials
- b) Construction and maintenance of the sites of construction projects
- c) Construction and maintenance of water supply and sanitary engineering
- d) Infrastructure survey for architectural engineering
- e) Supervising architectural engineering
- f) Providing information for the preparation of tender documents for construction and maintenance of architectural engineering
- g) Design of simple infrastructure for architectural engineering.

The Occupational standards have been clustered into NTA qualification levels i.e. NTA Levels 4, 5 and 6.

4.0. VALIDITY PERIOD

Due to the rapid development of technology, the validity period of occupational standards is 3 - 5 years. The review will proceed in the same manner as the one before it, with new occupational standards being developed based on current trends of the labour market.

5.0. OCCUPATIONAL STANDARDS

5.1 OCCUPATIONAL STANDARDS FOR ARCHITECTURAL ENGINEERING TECHNICIAN - NTA LEVEL 6

OCCUPATION	ARCHITECTURAL ENGINEERING TECHNICIAN	OCCUPATION CODE			
DUTY TITLE	IMPLEMENT CONSTRUCTION ORGANISATION PLANS				
TASK TITLE	IMPLEMENT CONSTRUCTION LAYOUT SCHEME	TASK NO.	6011		
PERFORMANCE CRITERIA The person performing this task must be able to carry out the planned layout of the construction sites, according to the construction organisation plans and the standards and guidelines approved by the competent authorities.					
RANGE STATEMENT The task can be performed in the offices and on the construction sites under the supervision of senior technicians or architectural engineers. The tools and equipment to be used include: 1. Computers, stationery, office furniture; 2. Measuring instruments; 3. Safety helmets, puncture-proof labour protection shoes.					
	EVIDENCE REQUIREMENT	1			

PRACTICAL PERFORMANCE

The person performing this task must be able to do the following:

- 1. Read and interpret the construction plans;
- 2. Collect the original data of the construction sites;
- 3. Submit the location and outline of the proposed buildings;
- 4. Arrange the location of transportation equipment such as tower cranes;
- 5. Arrange the location of mixing plants;
- Arrange the location of material and component storage yards or warehouses;
- 7. Arrange the location of processing areas;
- 8. Arrange the location of roads for construction transportation;
- 9. Arrange the location of temporary facilities;
- 10. Arrange the water and electricity network for construction;
- 12. Observe health, occupational and environmental safety rules and regulations.

UNDERPINNING KNOWLEDGE

Detailed knowledge about:

1.0 Methods

The person performing this task must be able to explain how to:

- 1.1 Read and interpret legends, scales, direction and wind vanes;
- 1.2 Inspect the construction sites;
- 1.3 Introduce the off-site roads and water and electricity for construction;
- 1.4 Locate buildings;
- 1.5 Lay out the construction facilities.

2.0 Principles

The person performing this task must be able to explain the following principles:

- 2.1 The principles of arranging construction sites;
- 2.2 The principles of construction site dynamic management;
- 2.3 Architectural engineering surveying and lay out specifications;
- 2.4 Construction sites management specifications;
- 2.5 Fire safety specifications;
- 2.6 Environmental and labour protection specifications;
- 2.7 Specifications for construction safety management.

3.0 Theories

The person performing this task must be able to explain the following:

- 3.1 Measurement methods for architectural engineering surveying;
- 3.2 Methods for architectural engineering positioning and laying out;
- 3.3 Methods for construction site reconnaissance.

4.0 Essential Skills

- 4.1 Communication skills;
- 4.2 Teamwork;
- 4.3 Overall planning and coordination;
- 4.4 Time management;
- 4.5 Calculating skills.

DESCRIPTION OF THE END PRODUCT / SERVICE

Construction site layout is completed in accordance with the construction organisation plans and

	standards and guidelines approved by the competent authorities.
CIRCUMSTANTIAL KNOWLEDGE	Detailed knowledge about:

The person performing this task must be		Detailed knowledge al	bout:	
able to do the following:		1.0 Methods		

- 1. Prepare resource mobilisation plans;
- 2. Purchase building materials;
- 3. Lease or order construction equipment;
- 4. Allocate different types of construction personnel;
- 5. Organise materials and equipment mobilisation in accordance with construction plans;
- 6. Check, inspect and accept mobilised materials and equipment;
- 7. Store and manage the mobilised materials and equipment;
- 8. Establish ledgers of materials and equipment management;
- 9. Organise different types of construction personnel to enter the sites according to the construction plans;
- 10. Review the qualifications o construction personnel;
- 11. Train construction personnel;
- 12. Establish ledgers of construction personnel management.

The person performing this task must be able to explain how to:

- 1.1 Prepare plans;
- 1.2 Calculate statistics;
- 1.3 Check the production licenses, product certificates, technical standards, instructions, inspection reports, qualifications, certificates;
- 1.4 Check the appearance, size, weight, quantity, performance;
- 1.5 Conduct test run of mechanical equipment;
- 1.6 Prepare and manage ledgers.

2.0 Principles

The person performing this task must be able to explain the following principles:

- 2.1 Principles of statistical analysis of data;
- 2.2 Principles of construction organisation;
- 2.3 Principle of construction management;
- 2.4 Laws and regulations of architectural engineering.

3.0 Theories

The person performing this task must be able to explain the following:

- 3.1 Methods of preparing plans and ledgers;
- 3.2 Methods of resource procurement, inspection, acceptance, storage and management;
- 3.3 Methods of operating and using construction equipment;
- 3.4 Methods of construction personnel management.

4.0 Essential Skills

- 4.1 Communication skills;
- 4.2 Teamwork:
- 4.3 Overall planning and coordination;
- 4.4 Time management;
- 4.5 Calculating skills;
- 4.6 Writing competence.

DESCRIPTION OF THE END PRODUCT / SERVICE

The mobilisation of construction resources is completed in accordance with the construction organisation plans and the standards and guidelines approved by the competent authorities.

CIRCUMSTANTIAL KNOWLEDGE

EVIDENCE REQUIREMENT				
PRACTICAL PERFORMANCE UNDERPINNING KNOWLEDGE				

The person performing this task must be able to do the following:

- 1. Understand the project characteristics and construction difficulties;
- 2. Understand the design intent and implement standards;
- 3. Understand the construction processes and methods, and the key points of construction operation;
- 4. Be familiar with safety and quality standards:
- 5. Be familiar with the drawing specifications;
- 6. Be familiar with construction processes and procedures;
- 7. Be familiar with safety and quality standards.

Detailed knowledge about:

1.0 Methods

The person performing this task must be able to explain how to:

- 1.1 Be familiar with standards and design specifications;
- 1.2 Be familiar with the national laws and regulations.

2.0 Principles

The person performing this task must be able to explain the following principles:

- 2.1 Construction specifications for each process;
- 2.2 The contents, relationships, and relevant requirements of each process;
- 2.3 Key points and operational essentials of each process;
- 2.4 Working principles of construction machinery and equipment;
- 2.5 Specifications of the quality and safety management of architectural engineering;
- 2.6 Specifications of construction project management.

3.0 Theories

The person performing this task must be able to explain the following:

- 3.1 Architectural construction and drawing recognition;
- 3.2 Mechanical drawing and map reading;
- 3.3 Categories of construction materials;
- 3.4 Construction processes of architectural engineering;
- 3.5 Types, structure and technical performance of construction machinery and equipment.

4.0 Essential Skills

- 4.1 Teamwork skills:
- 4.2 Communication skills;
- 4.3 Computer skills;
- 4.4 Analysis skills;
- 4.5 Creativity;
- 4.6 Adaptability;
- 4.7 Time management.

5.0 Math Skills

5.1 Calculation and data processing competence.

DESCRIPTION OF THE END PRODUCT / SERVICE

The project characteristics, construction difficulties, the contents, relationships, relevant requirements and the key points of operation are introduced to the work crew according to the construction technical schemes.

RANGE STATEMENT The task can be performed on the construction sites under the supervision of senior technicians or architectural engineers.					
	The tools and equipment to be used include:				
	1. Drawings, level gauges, total stations, steel rulers, telemeter rod, lining poles, angularity testers, etc.				
	ELIDENICE DECLUDENCENT				

EVIDENCE REQUIREMENT

PRACTICAL PERFORMANCE

The person performing this task must be able to do the following:

- 1. Identify the coordinates of the points on the drawings;
- 2. Identify the dimensions on the drawings;
- 3. Use the level gauge to check the results of laying out measurement;
- 4. Use the total station to check the results of setting out measurement.

UNDERPINNING KNOWLEDGE

1.0 Methods

Detailed knowledge about:

The person performing this task must be able to explain how to:

- 1.1 Be familiar with the coordinates and dimensions on the drawings;
- 1.2 Use a measuring instrument to check the results of laying out measurement.

2.0 Principles

The person performing this task must be able to explain the following principles:

- 2.1 Methods of measuring distance with a steel ruler;
- 2.2 Principles of leveling survey;
- 2.3 Methods of coordinate measurement;
- 2.4 Specifications of the quality and safety management of architectural engineering;
- 2.5 Specifications of construction project management.

3.0 Theories

The person performing this task must be able to explain the following:

	3.1 Knowledge of architectural construction and drawing recognition;	
	3.2 Construction processes of architectural engineering;	
	3.3 Measurement methods of architectural engineering;	
	3.4 Construction technologies of architectural engineering;	
	3.5 Underpinning knowledge of measurement.	
	4.0 Essential Skills	
	4.1 Teamwork skills;	
	4.2 Communication skills;	
	4.3 Computer skills;	
	4.4 Analysis skills;	
	4.5 Creativity;	
	4.6 Adaptability;	
	4.7 Time management.	
	5.0 Math Skills	
	5.1 Calculation and data processing competence.	
DESCRIPTION OF THE END PRODUCT / SERVICE	The measuring instrument or tools are used to check the results of laying out measurement according to the coordinates and dimensions of the points on the drawings.	
CIRCUMSTANTIAL KNOWLEDGE	Detailed knowledge about:	
	1. Scope of duties;	
	2. Occupational safety and health.

DUTY TITLE	CONTROL PROJECT SAFETY	DUTY NO.	605	
TASK TITLE	IDENTIFY HAZARDOUS SOURCES AND RECORD WORK SAFETY SITUATIONS	TASK NO.	6052	
PERFORMANCE CRITERIA	The person performing this task must be able to identify the hazardous sources of the architectural engineering according to the hazard identification lists, and record the safety situations in the production and construction process in detail.			
RANGE STATEMENT	The task can be performed on the construction sites under the supervision of senior technicians or architectural engineers. The tools and equipment to be used include: 1. Necessary safety equipment; 2. Computers; 3. Stationery; 4. Office furniture; 5. Hazard sources identification lists of architectural engineering.			
EVIDENCE DECLIDEMENT				

EVIDENCE REQUIREMENT

PRACTICAL PERFORMANCE

The person performing this task must be able to do the following:

- 1. Memorize the hazardous sources identification lists of architectural engineering;
- 2. Conduct safety education and training for all practitioners according to the lists of hazardous sources;
- 3. Conduct regular site safety inspection according to the hazardous sources lists:
- 4. Establish the mechanism of hazard identification and rectification of hidden hazards, and discover and rectify hidden hazards in time;
- 5. Establish emergency plans and exercise mechanisms;
- 6. Establish special operation personnel management mechanisms, such as working with certificates, training regularly and health examination.

UNDERPINNING KNOWLEDGE

1.0 Methods

The person performing this task must be able to explain how to:

1.1 Identify hazard sources;

Detailed knowledge about:

1.2 Record work safety situations.

2.0 Principles

The person performing this task must be able to explain the following principles:

- 2.1 Rules and regulations of work safety and regulations of construction sites safety;
- 2.2 Safety measures on construction sites.

3.0 Theories

The person performing this task must be able to explain the following:

- 3.1 Engineering mechanics;
- 3.2 Structure analysis;
- 3.3 Architectural engineering materials;
- 3.4 Construction technologies of architectural engineering;
- 3.5 Architectural drawing and map recognition;
- 3.6 Quality and safety management of architectural engineering;

	5.1 Math skills in the field of algebra;	
	5.2 Computing skills.	
DESCRIPTION OF THE END PRODUCT / SERVICE	The safety education and training and safety accident emergency and rescue drills are organised by project operators, according to the specifications and methods approved by the competent authorities.	
CIRCUMSTANTIAL	Detailed knowledge about:	
KNOWLEDGE	1. Scope of duties;	
	2. Occupational safety and health.	

OCCUPATION	ARCHITECTURAL ENGINEERING TECHNICIAN	OCCUPATION CODE	
DUTY TITLE	MANAGE CONSTRUCTION DATA	DUTY NO.	606
TASK TITLE	COLLECT AND SORT THE CONSTRUCTION DATA TASK NO. 6061		
PERFORMANCE CRITERIA	The person performing this task must be able to collect and organise construction data according to the standards and guidelines approved by the competent authorities.		
RANGE STATEMENT	The task can be performed in the offices and on the construction sites under the supervision of senior technicians or architectural engineers. The tools and equipment to be used include: 1. Computers, printers, copiers, scanners; 2. Document cabinets, folders, punchers, shredders; 3. Notebooks, pens, phones.		
ENIDENCE DECLIDEMENT			

EVIDENCE REQUIREMENT

PRACTICAL PERFORMANCE

The person performing this task must be able to do the following:

- 1. Prepare the management plans of construction data;
- 2. Establish the ledgers of construction data;
- 3. Make the meeting signature forms;
- 4. Make the drawing joint review summaries:
- 5. Collect and sort the drawing review and data change;
- 6. Collect and sort the construction site technical disclosure data;
- 7. Collect and sort the construction quality inspection and acceptance data;
- 8. Collect and sort the quality rectification data;
- 9. Collect and sort the project schedule data;
- 10. Collect and sort the identity information, qualifications, training materials of labourers;
- 11. Collect and sort out project negotiation records, correspondence and contract documents;
- 12. Collect and sort the materials, equipment purchase, inspection and acceptance, and sampling reinspection data;

UNDERPINNING KNOWLEDGE

Detailed knowledge about:

1.0 Methods

The person performing this task must be able to explain how to:

- 1.1 Make plans of construction data collection and sorting:
- 1.2 Establish ledgers of construction data collection and sorting;
- 1.3 Track, record and collect construction data;
- 1.4 Investigate and collect construction data on the spot;
- 1.5 Request and collect construction data;
- 1.6 Receive, review, and register construction data;
- 1.7 Classify, sort and keep construction data;
- 1.8 Input construction data by computers.

2.0 Principles

The person performing this task must be able to explain the following principles:

- 2.1 Laws and regulations of architectural engineering;
- 2.2 Post standards and management regulations;
- 2.3 Specifications for architectural engineering data management;
- 2.4 Specifications for construction and management.

3.0 Theories

The person performing this task must be able to explain the following:

13. Collect and sort the labour usage data	3.1 Methods of data collection;	
for labour, materials, and machinery;	3.2 Methods of data sorting;	
14. Collect and sort the data of the on-site certificate giving and settlement	3.3 Methods of data storage.	
15. Collect and sort out the data of safety	4.0 Essential Skills	
training, disclosure, and hidden hazard handling;	4.1 Communication skills;	
16. Collect and sort the construction data.	4.2 Teamwork;	
10. Concet and soft the construction data.	4.3 Overall planning and coordination;	
	4.4 Time management;	
	4.5 Calculating skills;	
	4.6 Writing competence.	
DESCRIPTION OF THE END PRODUCT / SERVICE	The collection and sorting of construction data are completed according to the standards and guidelines approved by the competent authorities.	
CIRCUMSTANTIAL KNOWLEDGE	Detailed knowledge about:	
	1. Occupational health and safety;	
	2. Secretary and official document writing;	
	3. Scopes of responsibilities.	

OCCUPATION	ARCHITECTURAL ENGINEERING TECHNICIAN	OCCUPATION CODE	
DUTY TITLE	MANAGE CONSTRUCTION DATA	DUTY NO.	606
TASK TITLE	ORGANISE AND ARCHIVE CONSTRUCTION DATA ON FILE TASK NO. 6062		
PERFORMANCE CRITERIA	The person performing this task must be able to organise and archive construction data on file according to the standards and guidelines approved by the competent authorities.		
RANGE STATEMENT	The task can be performed in the office under the supervision of senior technicians or architectural engineers. The tools and equipment to be used include: 1. Computers, printers, copiers, scanners; 2. Document cabinets, folders, punchers, shredders; 3. Notebooks, pens, phones.		
	EVIDENCE REQUIREMENT		
PRACTICAL PERE	ORMANCE UNDERPINNING KNO	WLEDGE	

PRACTICAL PERFORMANCE

The person performing this task must be able to do the following:

- Set and archive the drawing review and data change on file;
- Set and archive the construction 2. site technical disclosure data on file:
- 3. Set and archive the construction quality inspection and acceptance data on file:
- 4. Set and archive quality rectification data on file;
- Set and archive the identity 5. qualifications, information, training data of labourers on file;
- Set and archive the project 6. negotiation records, correspondence and external documents on file:
- Set and archive the materials, 7. equipment purchase, inspection and acceptance, and sampling reinspection data on file;
- Set and archive the labour usage data for labour, materials, and machinery on file;
- 9. Set and archive the data of the oncertificate giving settlement on file;

UNDERPINNING KNOWLEDGE

1.0 Methods

The person performing this task must be able to explain how to:

1.1 File the construction data;

Detailed knowledge about:

- 1.2 Archive the construction data:
- 1.3 Input construction data by computers.

2.0 Principles

The person performing this task must be able to explain the following principles:

- 2.1 Laws and regulations of architectural engineering;
- 2.2 Post standards and management regulations;
- 2.3 Specifications for architectural engineering data management;
- 2.4 Specifications for construction and management.

3.0 Theories

The person performing this task must be able to explain the following:

- 3.1 File composition and specification requirements;
- 3.2 File cover preparation methods;
- 3.3 File directory preparation methods;
- 3.4 Document arrangement numbering rules;
- 3.5 Filing methods;
- 3.6 Binding requirements for the files;
- 3.7 Archiving requirements for the files;

10. Set and archive the data of safety training, disclosure, and hidden hazard handling on file;11. Filing and archiving construction materials on file.	 4.0 Essential Skills 4.1 Communication skills; 4.2 Teamwork; 4.3 Overall planning and coordination; 4.4 Time management; 4.5 Calculating skills; 4.6 Writing competence. 	
DESCRIPTION OF THE END PRODUCT / SERVICE	The conduct of organising and archiving construction data on file is completed according to the standards and guidelines approved by the competent authorities.	
CIRCUMSTANTIAL KNOWLEDGE	Detailed knowledge about: 1. Occupational health and safety; 2. Secretary and official document writing; 3. Scopes of responsibilities.

able to do the following:

- ledgers Establish the the inspection, acceptance and transfer of construction data:
- 2. Clarify the laws and regulations of the inspection, acceptance and transfer of construction data;
- 3. Check whether the classification of the construction data is complete;
- Check whether the contents of the construction data are true and accurate:
- 5. Check whether the signing procedures of the construction data are complete;
- 6. Check whether the construction materials, format, writing, drawing and mounting of the construction data meet the requirements;
- 7. Fill in the construction data acceptance forms;
- Transfer construction data; 8.
- Handle the data transfer procedures.

1.0 Methods

The person performing this task must be able to explain how to:

- 1.1 Check, inspect and accept construction data;
- 1.2 Transfer construction data;
- 1.3 Handle the inspection, acceptance and transfer procedures of construction data;
- 1.4 Input construction data by computers.

2.0 Principles

The person performing this task must be able to explain the following principles:

- 2.1 Laws regulations and of architectural engineering;
- 2.2 Post standards and management regulations;
- 2.3 Specifications for architectural engineering data management;
- 2.4 Specifications for construction and management.

3.0 Theories

The person performing this task must be able to explain the following:

- 3.1 Provisions and methods for data inspection and acceptance;
- 3.2 Procedures and regulations for data transfer.

4.0 Essential Skills

4.1 Communication skills:

	4.2 Teamwork;	
	4.3 Overall planning and coordination;	
	4.4 Time management;	
	4.5 Calculating skills;	
	4.6 Writing competence.	
DESCRIPTION OF THE END PRODUCT / SERVICE	The inspection, acceptance, and transfer of construction data are completed according to the standards and guidelines approved by the competent authorities.
