TABLE 1: DACUM CHARTS FOR WELDING TECHNICIAN - NTA 6	39

ABBREVIATIONS

AC	Alternating Current
CBET	Competency Based Education and Training
DC	Direct Current
EWD	Electrode-to-wire Distance
EWPD	Electrode-to-welded Part Distance
ET	Eddy current Testing
MAG	Metal Active Gas Arc Welding
MIG	Metal Inert-gas Welding
MT	Magnetic Particle Testing
NACTVET	National Council for Technical and Vocational Education and Training
NDT	Non-destructive Testing
NOS	National Occupational Standards
OS	Occupational Standards
PT	Penetrant Testing
RT	Radiographic Testing
TET	Technical Education and Training
TIG	Tungsten Inert Gas Welding
TVET	Technical and Vocational Education and Training
UT	Ultrasonic Testing
VPPAW	Variable Polarity Plasma Welding
WFS	Wire Feed Rate

GLOSSARY OF TERMS

Circumstantial Knowledge:	Detailed knowledge, which allows the decision-making in regard to different circumstances and cross cutting issues.
Competence:	The ability to use knowledge, understanding, practical, and thinking skills to perform effectively to the workplace standards required in employment.
Competency:	A description of the ability one possesses when able to perform a given occupational task effectively and efficiently.
Competency-based Education:	An instructional programme that derives its content from validated tasks and bases assessment on the learner's performance.
Curriculum:	A description or composite of statements about "what is to be learned" by the trainee/student in a particular instructional programme; a product that states the "intended learning outcomes".
Educational/Training Programme:	The complete curriculum and instruction (what and how) that is designed to prepare a person for employment in a job or other particular performance situation.
Occupation:	A specific position requiring the performance of specific tasks - essentially the same tasks are performed by all employees having the same title. (Example: baker)
Occupational Area:	This is a broad grouping of related jobs. (Example: food service).
Occupational Standards:	Specific requirements of competences for personnel in a particular occupational area, including knowledge and relevant attitudes. They also act as performance tools of assessment of the prescribed outcomes.
Occupational/Job Analysis:	A process used to identify the tasks that are important to employees in any given occupation.
Performance Criteria:	Indicate expected end results or outcomes in the form of evaluative statements.
Skills:	The ability to perform occupational tasks with a high degree of proficiency within a given occupation. Skill is conceived of as a composite of three completely interdependent components: cognitive, affective, and psychomotor.
Standards:	A set of statements, which, if proved true under working conditions, means that an individual is meeting an expected level and type of performance.

Task Analysis:	The process of analysing each task to determine the steps, circumstantial knowledge, attitudes, performance criteria, tools and materials needed, as well as safety concerns required for the employees performing it.
Task:	A work activity that has a definite beginning and ending, is observable or measurable, consists of two or more definite steps, and leads to products, service, or decisions.
Underpinning Knowledge:	Crucial knowledge that an individual must acquire in order to demonstrate competences that are associated in performing a given task.
Verification Process:	The process of having experts review and confirm the importance of the task (competency) statements identified through occupational analysis. Other questions, such as the degree of task learning difficulty are also frequently asked. This process is also sometimes referred to as validation.
Occupational Competence:	The application of knowledge and skills that consistently meet the standards required by the working conditions.

1.0. INTRODUCTION

Technical Education and Training (TET) is one of the most important education sub-sectors in Tanzania, responsible for developing a skilled workforce to support the country's industrialization economic agenda. Tanzania's *Development Vision 2025* intends to raise the country's economy to a middle-income status. This requires a skilled workforce that is aligned with the needs of the public and private sectors of the economy. The National Council for Technical and Vocational Education and Training of Tanzania has begun the job of drafting Occupational Standards that will eventually be adopted as National Occupational Standards for TET in order to ensure that it meets the needs of the labour market and the country's economic agenda.

National Occupational Standards (NOS) are performance criteria that are matched with labour market demands. Each National Occupational Standard describes functions, performance standards, and knowledge/understanding for one important function or task. They combine skills, knowledge, and attitudes to describe best practice. They are useful tools for establishing job roles, personnel recruiting, supervision, and appraisal, as well as TET standards. They're also helpful for benchmarking and harmonizing qualifications on a national and international level. Standards, in general, provide a solid framework for high-quality TET that is labour market-relevant, current and consistent in delivery across all public and private institutions.

However, it must be noted that, Occupational Standards and Training standards/qualifications standards are different. Occupational Standards are defined in terms of activities performed by a person in a selected occupation (e.g., an electrical engineer designs electrical wiring circuits, performs troubleshooting in electrical wiring, etc.) and they are usually defined by employers following procedures agreed upon by all stakeholders. Education and training standards are developed from the activities defined in occupational standards, and they include learning objectives to ensure that the necessary skills and knowledge are developed by a person to enable him or her to function at an agreed level in an occupation. Education and Training standards are used to define curricula in training institutions. It is however critical that there must be a direct link between the Occupational Standards and the training standards to respond to demands of the labour market.

In TET delivery, Tanzania adopted the Competence Based Education and Training (CBET) approach. The CBET approach focuses on providing learners with the skills and knowledge required to meet the Occupational Standards. Occupational Standards are thus the starting point for developing competency-based training (CBET) programmes. TET institutions will be required to benchmark their curricula with relevant Occupational Standards.

Occupational Standards are developed based on a given occupation's current and future demands. As a result, they serve as a means of bridging the gap between the worlds of employment and technical education and training (TET).

The Welding Technician Occupation has its own set of occupational standards. The document explains how the Occupational Standards were developed, as well as the scope, the occupational profile in the form of DACUM charts, and the Occupational Standards.

2.0. OCCUPATIONAL STANDARD DEVELOPMENT PROCESS

The Occupational Standards development process began with an examination of major documents that guide Tanzanian skill development. The *10-year National Skills Development Strategy (2016-2026)* was one of the documents reviewed, and it outlined six (6) economic sectors that should be prioritized when developing skills development programmes.

These sectors include: Transport and Logistics, Tourism and Hospitality, Agribusiness, Construction, Energy and ICT. NACTE labour market reports were also used in the literature review to determine the skills demand in the Tanzanian labour market as a whole.

After the literature review, a workshop comprised of experts and educators with substantial knowledge and experience in the occupation conducted an occupational analysis utilizing the DACUM approach to produce the occupational profile. The analysis resulted in DACUM Charts, which are attached as **Appendix 1** to this document.

The Occupational Standards were then developed. Experts in Occupational Analysis and the Development of Occupational Standards facilitated the workshop. Interviews, online surveys, and a stakeholder forum were used to validate the Occupational Standards. Engineers, supervisory technicians on the job, and experienced Welding Technicians were key informants in the survey to discover occupational trends. The information was used to gain insight from the workplaces regarding trends and changes in the profession, including how well graduates are prepared for working in the occupation. A total of online surveys were completed by experts from the labour market across the country. Apart from the survey aiding in defining the scope for the occupational analysis, they also served to engage a wide cross-section of experts in the occupation. Apart from this, the stakeholders' forum was attended by ... participants from different parts of the country representing various companies.

3.0. THE SCOPE AND OVERVIEW OF THE OCCUPATION STANDARDS FOR WELDING TECHNICIAN

The standards cover a broad range of duties and tasks that can be performed by a Welding Technician. However, the occupational standards are not meant to replace individual job

descriptions. Instead, they are to be used for guidance in defining skill levels and knowledge for the technician in specific settings or positions. The Welding Technician may perform tasks in a number of key areas of the Occupational Standards, but not necessarily in all areas. For example, in large operations, other individuals may be employed or designated to perform specific tasks.

The Welding Technician shall weld and inspect welded joints in various engineering structural parts in a safe environment under the supervision of engineers. In the workshop, technicians complete various welding and inspection tasks, ranging from simple manual shielded metal arc welding of flat butt joints to gas welding of all positions, developing welding procedures, and inspecting welding defects. Generally, the Welding Technician performs the following duties:

- a) Implementation of welding safety operation
- b) Formulation of simple welding process
- c) Inspection and maintenance of welding equipment
- d) Manual Shielded Metal Arc Welding (SMAW) of flat butt joint
- e) Manual Shielded Metal Arc Welding (SMAW) of horizontal butt joint
- f) Manual Shielded Metal Arc Welding (SMAW) of vertical butt joint
- g) Gas Metal Arc Welding (GMAW) of flat butt joint with consumable electrode and gas shield
- h) Gas Metal Arc Welding (GMAW) of horizontal butt joint with consumable electrode and gas shield
- i) Gas Metal Arc Welding (GMAW) of vertical butt joint with consumable electrode and gas shield
- j) Manual tungsten inert gas welding of flat butt joint
- k) Horizontal and vertical manual tungsten inert gas welding
- l) Gas welding of flat fillet joint
- m) Gas welding of flat butt joint
- n) All-position gas welding
- o) Brazing of low carbon steel
- p) Inspection of welding defects

The Occupational Standards have been clustered into NTA qualification levels, i.e. NTA 4, 5 and 6.

4.0. VALIDITY PERIOD

Due to the rapid development of technology, the validity period of occupational standards is 3-5 years. The review will proceed in the same manner as the one before it, with new occupational standards being developed based on current trends of the labour market.

5.0. OCCUPATIONAL STANDARDS

5.1. OCCUPATIONAL STANDARDS FOR WELDING TECHNICIAN - NTA 6

OCCUPATION	WELDING TECHNICIAN	OCCUPATION CODE	
DUTY TITLE	DETECTION OF WELDING DEFECTS	DUTY NO.	601
TASK TITLE	ANALYSIS OF WELDING DEFECTS	TASK NO.	6011
PERFORMANCE CRITERIA	The person performing this task must be able to classify welding defects and accurately identify the types of defects in the welded joints.		
RANGE STATEMENT	The task can be performed in the welding inspection workshop under the supervision of welding engineers or inspection engineers. The tools and equipment to be used include: 1. Welded joints with defects; 2. Spotlights; 3. Film viewer; 4. Magnifier; 5. Slides; 6. Defect images.		
EVIDENCE REQUIREMENT			
PRACTICAL PERFORMANCE		UNDERPINNING KNOWLEDGE	
The person performing this task must be able to do the following: 1. Select appropriate tools and equipment; 2. Observe and identify visual defects; 3. Use a film viewer to analyze internal defects; 4. Use defect images to identify various welding defects; 5. Use slides to learn how to differentiate between defect types; 6. Clean the tools, equipment and workplace; 7. Store tools and equipment.		Detailed knowledge about: 1.0 Methods The person performing this task must be able to explain how to: 1.1 Observe the health and safety prevention measures; 1.2 Classify welding detections; 1.3 Identify types of welding defects. 2.0 Methods The person performing this task must be able to explain the following principles: 2.1 Properties and characteristics of various welding defects; 2.2 The impact of welding defects on joint performance; 2.3 Specific methods for destructive testing; 2.4 Types and principles of non-destructive testing. 3.0 Theories The person performing this task must be able to explain the following: 3.1 Causes and influencing factors of various welding defects; 3.2 Measures to prevent welding defects. 4.0 Essential skills	

	4.1 Communication skills; 4.2 Customer service skills; 4.3 Teamwork skills; 4.4 Report writing skills; 4.5 Learning skills.
DESCRIPTION OF THE END PRODUCT / SERVICE:	Welding defects are identified based on their characteristics.
CIRCUMSTANTIAL KNOWLEDGE:	Detailed knowledge about: 1. Safety operation of testing instruments; 2. Occupational health and safety.

OCCUPATION	WELDING TECHNICIAN	OCCUPATION CODE	
DUTY TITLE	DETECTION OF WELDING DEFECTS	DUTY NO.	601
TASK TITLE	CONVENTIONAL WELDING INSPECTION OPERATIONS	TASK NO.	6012
PERFORMANCE CRITERIA	The person performing this task must be able to detect and determine the level of welding defects in accordance with technical requirements.		
RANGE STATEMENT	The task can be performed in the welding inspection workshop under the supervision of welding engineers or inspection engineers. The tools and equipment to be used include: 1. Welded joints to be inspected; 2. Spotlights; 3. Machines for tensile, bend, impact, and hardness tests; 4. A Complete set of metallographic inspection equipment and consumables; 5. Visual detection equipment and instruments; 6. X-ray sets, film viewers, film systems, intensifying screens, image quality meters, and a complete set of auxiliary equipment; 7. Safety lamps, darkrooms and supporting equipment, darkroom processing reagents; 8. Ultrasonic detectors, test blocks, coupling agents; 9. Magnetic particle testing flaw detectors, magnetic particles or suspensions, standard test pieces and test blocks; 10. Dye penetrant testing materials, equipment, and test blocks; 11. Eddy current testing sensors, host machines, and comparative samples; 12. Pressure test media and supporting instruments; 13. Leakage test media and supporting instruments; 14. Personal protective equipment such as safety shoes, goggles, gloves, and work clothes.		
EVIDENCE REQUIREMENT			
PRACTICAL PERFORMANCE		UNDERPINNING KNOWLEDGE	
The person performing this task must be able to do the following: 1. Observe the health and safety prevention measures; 2. Select appropriate operation tools and equipment; 3. Inspect appearance defects; 4. Inspect surface and near-surface defects; 5. Inspect internal defects; 6. Inspect weld strength; 7. Inspect the sealing of welded joints; 8. Inspect joint structure;		Detailed knowledge about: 1.0 Methods The person performing this task must be able to explain how to: 1.1 Carry out destructive testing; 1.2 Inspect on the appearance; 1.3 Perform non-destructive testing; 1.4 Inspect the strength and sealing of joints; 1.5 Grade welding defects. 2.0 Methods The person performing this task must be able to explain the following principles: 2.1 Principles of destructive testing for welded joints;	

9. Clean the tools, equipment and workplace; 10. Store tools and equipment.	2.2 Principles of non-destructive testing methods for welded joints; 2.3 Principles of compressive strength and sealing testing of welded joints. 3.0 Theories The person performing this task must be able to explain the following: 3.1 Precautions for possible defects in welded joints; 3.2 Inspection methods and operation requirements for detecting welding defects. 4.0 Essential skills 4.1 Communication skills; 4.2 Customer service skills; 4.3 Teamwork skills; 4.4 Report writing skills. 5.0 Mathematical skills 5.1 Geometry.
DESCRIPTION OF THE END PRODUCT / SERVICE:	Testing methods are selected based on technical standards to identify and rate welding defects.
CIRCUMSTANTIAL KNOWLEDGE:	Detailed knowledge about: 1. Safety operation of testing instruments; 2. Occupational health and safety protection; 3. Environmental protection; 4. Radiation protection.

OCCUPATION	WELDING TECHNICIAN	OCCUPATION CODE	
DUTY TITLE	MANUAL SHIELDED METAL ARC WELDING (SMAW) OF VERTICAL BUTT JOINT	DUTY NO.	602
TASK TITLE	VERTICAL BUTT WELDING OF LOW CARBON OR LOW ALLOY STEEL PLATES USING SHIELDED METAL ARC WELDING	TASK NO.	6021
PERFORMANCE CRITERIA	The person performing this task must be able to use shielded metal arc welding based on the welding process manual to accomplish butt joint welding and quality inspection of the weld seam appearance for low carbon steel or low alloy steel plates.		
RANGE STATEMENT	The task can be performed in a factory or welding site under the supervision of welding engineers. The tools and equipment to be used include: 1. Personal protective equipment such as flame-retardant work clothes, insulated safety shoes, splash-proof goggles, safety helmets, welding leather gloves, and head-mounted welding masks; 2. Welding documents such as welding construction drawings and welding process manuals; 3. DC arc welding power supplies such as welding cables, 300A welding tongs, and ground clamps; 4. Groove cleaning tools such as electric or pneumatic angle grinders and electric or pneumatic straight grinders; 5. Auxiliary tools such as slag hammers, chisels, and pliers; 6. Welding rod drying equipment such as welding rod drying ovens and welding rod insulation barrels; 7. Welding seam testing tools such as welding seam testing rulers, steel straightedges, scribes, and marker pens; 8. Welding materials, such as welding rods that meet the requirements of the welding process manual.		
EVIDENCE REQUIREMENT			
PRACTICAL PERFORMANCE		UNDERPINNING KNOWLEDGE	
The person performing this task must be able to do the following: 1. Read welding construction drawings and welding process manuals; 2. Start up and adjust DC arc welding power supplies; 3. Dry and insulate welding rods; 4. Perform pre-weld cleaning on grooves; 5. Assemble and position welding plate joints; 6. Perform bottom layer single-sided welding and double-sided forming, filling/covering layer welding;		Detailed knowledge about: 1.0 Methods The person performing this task must be able to explain how to: 1.1 Adjust the process parameters of DC arc welding power supplies; 1.2 Perform groove cleaning and assembly; 1.3 Carry out butt welding of low carbon steel or low alloy steel plates; 1.4 Conduct welding seam appearance quality inspection. 2.0 Principle The person performing this task must be able to explain	

7. Clean up the weld layer/pass; 8. Inspect the appearance quality of the weld seam; 9. Fill out the weld seam inspection certificate; 10. Clean up the work site.	the following principles: 2.1 Principles for selecting welding process parameters for vertical butt welding of low carbon or low alloy steel plates using shielded metal arc welding; 2.2 Key points for assembly operation and positioned welding requirements of groove for butt-welding low carbon or low alloy steel plates; 2.3 Key points for welding operations of vertical butt welding of low carbon or low alloy steel plates using shielded metal arc welding; 2.4 Control board butt welding deformation process measures standards; 2.5 Weld seam appearance quality inspection standards. 3.0 Theories The person performing this task must be able to explain the following: 3.1 Specific content of welding patterns and symbols; 3.2 Weldability standards for low carbon steel and low alloy steel; 3.3 Underpinning knowledge of welding power supply; 3.4 Metallurgical characteristics of welding; 3.5 Circumstantial knowledge of welding rod; 3.6 Key points regarding welding stress and deformation; 3.7 Classification of welding defects. 4.0 Essential skills 4.1 Occupational health and safety; 4.2 Teamwork skills; 4.3 Report writing skills; 4.4 Learning skills.
DESCRIPTION OF THE END PRODUCT / SERVICE:	The vertical butt welding of low carbon or low alloy steel plates using shielded metal arc welding is completed in accordance with technical requirements or relevant quality standards provided in construction drawings.
CIRCUMSTANTIAL KNOWLEDGE:	Detailed knowledge about: 1. Occupational health and safety.

OCCUPATION	WELDING TECHNICIAN	OCCUPATION CODE	
DUTY TITLE	MANUAL SHIELDED METAL ARC WELDING (SMAW) OF VERTICAL BUTT JOINT	DUTY NO.	602
TASK TITLE	HORIZONTALLY FIXED WELDING FOR BUTT-WELDING LOW CARBON OR LOW ALLOY STEEL PIPES	TASK NO.	6022
PERFORMANCE CRITERIA	The person performing this task must be able to use shielded metal arc welding based on the welding process manual to accomplish horizontally fixed welding for butt-welding low carbon or low alloy steel pipes and quality inspection of the weld seam appearance for low carbon steel or low alloy steel pipes.		
RANGE STATEMENT	The task can be performed in a factory or welding site under the supervision of welding engineers. The tools and equipment to be used include: 1. Personal protective equipment such as flame-retardant work clothes, insulated safety shoes, splash-proof goggles, safety helmets, welding leather gloves, and head-mounted welding masks; 2. Welding documents such as welding construction drawings and welding process manuals; 3. DC arc welding power supplies such as welding cables, 300A welding tongs, and ground clamps; 4. Groove cleaning tools such as electric or pneumatic angle grinders and electric or pneumatic straight grinders; 5. Auxiliary tools such as slag hammers, chisels, and pliers; 6. Welding rod drying equipment such as welding rod drying ovens and welding rod insulation barrels; 7. Welding seam testing tools such as welding seam testing rulers, steel straightedges, scribes, and marker pens; 8. Welding materials, such as welding rods that meet the requirements of the welding process manual.		
EVIDENCE REQUIREMENT			
PRACTICAL PERFORMANCE		UNDERPINNING KNOWLEDGE	
The person performing this task must be able to do the following: 1. Read welding construction drawings and welding process manuals; 2. Start up and adjust DC arc welding power supplies; 3. Dry and insulate welding rods; 4. Clear the groove before welding preparation; 5. Assemble and position the pipe joints for welding; 6. Perform bottom layer,		Detailed knowledge about: 1.0 Methods The person performing this task must be able to explain how to: 1.1 Adjust the process parameters of DC arc welding power supplies; 1.2 Clean groove, assemble, and position the pipe joints for welding; 1.3 Carry out horizontally fixed welding for butt-welding low carbon or low alloy steel pipes; 1.4 Conduct welding seam appearance quality inspection.	

filling/capping layer welding operations. 7. Clean up the weld layer/pass; 8. Inspect the appearance quality of the weld seam; 9. Fill out the weld seam inspection certificate; 10. Clean up the work site.	2.0 Principle The person performing this task must be able to explain the following principles: 2.1 Principles for selecting welding process parameters of horizontally fixed welding for butt-welding low carbon or low alloy steel pipes; 2.2 Key points for assembly operation and positioned welding requirements of horizontally fixed groove for butt-welding low carbon or low alloy steel pipes; 2.3 Key points for welding operations of horizontally fixed welding for butt-welding low carbon or low alloy steel pipes; 2.4 Control valve butt welding deformation process measures standards; 2.5 Weld seam appearance quality inspection standards. 3.0 Theories The person performing this task must be able to explain the following: 3.1 Specific content of welding patterns and symbols; 3.2 Weldability of low carbon steel and low alloy steel; 3.3 Underpinning knowledge of welding power supply; 3.4 Metallurgical characteristics of welding; 3.5 Circumstantial knowledge of welding rod; 3.6 Key points regarding welding stress and deformation; 3.7 Classification of welding defects. 4.0 Essential skills 4.1 Teamwork skills; 4.2 Report writing skills; 4.3 Learning skills.
DESCRIPTION OF THE END PRODUCT / SERVICE:	The vertical butt welding of low carbon or low alloy steel plates using shielded metal arc welding is completed in accordance with technical requirements or relevant quality standards provided in construction drawings.
CIRCUMSTANTIAL KNOWLEDGE:	Detailed knowledge about: 1. Occupational health and safety; 2. Safety operations of electric or pneumatic tools.

OCCUPATION	WELDING TECHNICIAN	OCCUPATION CODE	
DUTIES	MANUAL SHIELDED METAL ARC WELDING (SMAW) OF VERTICAL BUTT JOINT	DUTY NO.	602
TASK TITLE	SADDLE-TYPE FULL-PENETRATION BEVEL JOINT FOR PIPE-TO-PLATE CONNECTION WELDED USING SHIELDED METAL ARC WELDING WITH WELDING ELECTRODES	TASK NO.	6023
PERFORMANCE CRITERIA	The person performing this task must be able to use shielded metal arc welding according to the welding process specification, complete the welding of saddle-type full-penetration bevel joint for pipe-to-plate connection and perform visual inspection of weld appearance quality.		
RANGE STATEMENT	The task can be performed in a factory or welding site under the supervision of welding engineers. The tools and equipment to be used include: 1. Personal protective equipment such as flame-retardant work clothes, insulated safety shoes, splash-proof goggles, safety helmets, welding leather gloves, and head-mounted welding masks; 2. Welding documents such as welding construction drawings and welding process manuals; 3. DC arc welding power supplies such as welding cables, 300A welding tongs, and ground clamps; 4. Groove cleaning tools such as electric or pneumatic angle grinders and electric or pneumatic straight grinders, pitsaw files; 5. Auxiliary tools include slag hammers and chisels; 6. Welding rod drying equipment such as welding rod drying ovens and welding rod insulation barrels; 7. Welding seam testing tools such as welding seam testing rulers, steel straightedges, scribes, and marker pens, welding seam sample rulers; 8. Welding materials, such as welding rods that meet the requirements of the welding process manual.		
EVIDENCE REQUIREMENT			
PRACTICAL PERFORMANCE		UNDERPINNING KNOWLEDGE	
The person performing this task must be able to do the following: 1. Read welding construction drawings and welding process manuals; 2. Start up and adjust DC arc welding power supplies; 3. Dry and insulate welding rods; 4. Clear the groove before welding preparation; 5. Assemble and position the pipe joints for welding;		Detailed knowledge about: 1.0 Methods The person performing this task must be able to explain how to: 1.1 Adjust the process parameters of DC arc welding power supplies; 1.2 Clean groove, assemble, and position the pipe-to-plate joints for welding; 1.3 Weld the saddle-type full-penetration bevel joint for pipe-to-plate connection; 1.4 Conduct welding seam appearance quality inspection.	

6. Perform bottom layer, filling/capping layer welding operations. 7. Clean up the weld layer/pass; 8. Inspect the appearance quality of the weld seam; 9. Fill out the weld seam inspection certificate; 10. Clean up the work site.	2.0 Principle The person performing this task must be able to explain the following principles: 2.1 Principles for selecting welding process parameters for saddle-type full-penetration bevel joint welding; 2.2 Key points for assembly and positioning welding requirements of saddle-type full-penetration bevel joint; 2.3 Key points for welding operations of saddle-type full-penetration bevel joint; 2.4 Control valve butt welding deformation process measures; 2.5 Weld seam appearance quality inspection standards. 3.0 Theories The person performing this task must be able to explain the following: 3.1 Specific content of welding patterns and symbols; 3.2 Weldability of low carbon steel and low alloy steel; 3.3 Underpinning knowledge of welding power supply; 3.4 Metallurgical characteristics of welding; 3.5 Circumstantial knowledge of welding rod; 3.6 Key points regarding welding stress and deformation; 3.7 Classification of welding defects. 4.0 Essential skills 4.1 Teamwork skills; 4.2 Report writing skills; 4.3 Learning skills.
DESCRIPTION OF THE END PRODUCT / SERVICE:	The welding of saddle-type full-penetration bevel joint for pipe-to-plate connection using shielded metal arc welding is completed in accordance with the construction drawing specifications or relevant quality standards;
CIRCUMSTANTIAL KNOWLEDGE:	Detailed knowledge about: 1. Occupational health and safety; 2. Safety operations of electric or pneumatic tools.

OCCUPATION	WELDING TECHNICIAN	OCCUPATION CODE	
DUTY TITLE	GAS METAL ARC WELDING (GMAW) OF VERTICAL BUTT JOINT WITH CONSUMABLE ELECTRODE AND GAS SHIELD	DUTY NO.	603
TASK TITLE	GAS METAL ARC WELDING FOR VERTICAL BUTT WELDING OF LOW CARBON STEEL OR LOW ALLOY STEEL PLATES	TASK NO.	6031
PERFORMANCE CRITERIA	The person performing this task must be able to use gas metal arc welding equipment to perform butt joint welding and visual inspection of weld appearance quality according to the welding process specification.		
RANGE STATEMENT	The task can be performed in a factory or welding site under the supervision of welding engineers. The tools and equipment to be used include: 1. Personal protective equipment such as flame-retardant work clothes, insulated safety shoes, splash-proof goggles, safety helmets, welding leather gloves, and head-mounted welding masks; 2. Welding documents such as welding construction drawings and welding process manuals; 3. Gas shielded welding power supply, such as welding guns, relief valves, ground clamps; 4. Groove cleaning tools such as electric or pneumatic angle grinders and electric or pneumatic straight grinders, pitsaw files; 5. Auxiliary tools include slag hammers and chisels; 6. Welding seam testing tools such as welding seam testing rulers, steel straightedges, scribes, and marker pens, welding seam sample rulers; 7. Welding materials, such as welding wire and welding shielding gas specified in the welding process specification.		
EVIDENCE REQUIREMENT			
PRACTICAL PERFORMANCE		UNDERPINNING KNOWLEDGE	
The person performing this task must be able to do the following: 1. Read welding construction drawings and welding process manuals; 2. Install and commission gas metal arc welding power supply; 3. Clear the groove before welding preparation; 4. Assemble and position welding of butt joint of low carbon steel or low alloy steel plates; 5. Perform bottom layer, filling/capping layer welding operations.		Detailed knowledge about: 1.0 Methods The person performing this task must be able to explain how to: 1.1 Adjust process parameters of gas metal arc welding; 1.2 Clean, assemble, and position welding of butt joint bevel of low carbon steel or low alloy steel plates; 1.3 Carry out vertical butt joint welding for low carbon or low alloy steel plates; 1.4 Conduct welding seam appearance quality inspection. 2.0 Principle The person performing this task must be able to explain the following principles:	

6. Clean up the weld layer/pass; 7. Detect the appearance quality of welds; 8. Fill out the weld seam inspection certificate; 9. Clean up the work site.	2.1 Principles for selecting welding process parameters for butt welding (vertical welding) of low carbon steel or low alloy steel plates; 2.2 Key points for assembly operation and positioned welding requirements of vertical butt joint for welding low carbon or low alloy steel plates; 2.3 Key points for welding operations of vertical butt joint welding for low carbon or low alloy steel plates; 2.4 Principle of control valve butt welding deformation; 2.5 Weld seam appearance quality inspection standards. 3.0 Theories The person performing this task must be able to explain the following: 3.1 Specific content of welding patterns and symbols; 3.2 Weldability of low carbon steel and low alloy steel; 3.3 Underpinning knowledge of welding power supply; 3.4 Metallurgical characteristics of welding; 3.5 Key points regarding welding stress and deformation; 3.6 Classification of welding defects. 4.0 Essential skills 4.1 Teamwork skills; 4.2 Report writing skills; 4.3 Learning skills.
DESCRIPTION OF THE END PRODUCT / SERVICE:	Gas shielded arc welding of butt joint melt electrode for low carbon steel or low alloy steel plates is completed in accordance with technical requirements or relevant quality standards provided in construction drawings.
CIRCUMSTANTIAL KNOWLEDGE:	Detailed knowledge about: 1. Occupational health and safety; 2. Safety operation of gas metal arc welding power supply; 3. Safety operations of electric or pneumatic tools.

OCCUPATION	WELDING TECHNICIAN	OCCUPATION CODE	
DUTY TITLE	GAS METAL ARC WELDING (GMAW) OF VERTICAL BUTT JOINT WITH CONSUMABLE ELECTRODE AND GAS SHIELD	DUTY NO.	603
TASK TITLE	HORIZONTALLY FIXED GAS METAL ARC WELDING FOR BUTT-WELDING LOW CARBON OR LOW ALLOY STEEL PIPES	TASK NO.	6032
PERFORMANCE CRITERIA	The person performing this task must be able to use gas metal arc welding equipment to complete the welding of horizontally fixed welding for butt-welding low carbon or low alloy steel pipes and perform visual inspection of weld appearance quality.		
RANGE STATEMENT	The task can be performed in a factory or welding site under the supervision of welding engineers. The tools and equipment to be used include: 1. Personal protective equipment such as flame-retardant work clothes, insulated safety shoes, splash-proof goggles, safety helmets, welding leather gloves, and head-mounted welding masks; 2. Welding documents such as welding construction drawings and welding process manuals; 3. Gas shielded welding power supply, such as welding guns, relief valves, ground clamps; 4. Groove cleaning tools such as electric or pneumatic angle grinders and electric or pneumatic straight grinders, pitsaw files; 5. Auxiliary tools include slag hammers and chisels; 6. Welding seam testing tools such as welding seam testing rulers, steel straightedges, scribes, and marker pens, welding seam sample rulers; 7. Welding materials, such as welding wire and welding shielding gas specified in the welding process specification.		
EVIDENCE REQUIREMENT

The person performing this task must be able to do the following: 1. Read welding construction drawings and welding process manuals; 2. Install and commission gas metal arc welding power supply; 3. Clear the groove before welding preparation; 4. Assemble and position welding of horizontally fixed joint for butt-welding low carbon steel or low alloy steel pipes; 5. Perform bottom layer,		Detailed knowledge about: 1.0 Methods The person performing this task must be able to explain how to: 1.1 Adjust process parameters of gas metal arc welding; 1.2 Clean, assemble, and position welding of horizontally fixed groove for butt-welding low carbon or low alloy steel pipes; 1.3 Weld the horizontally fixed joint for low carbon steel or low alloy steel pipe butt joint; 1.4 Conduct welding seam appearance quality inspection. 2.0 Principle	

filling/capping layer welding operations. 6. Weld layer/pass; 7. Detect the appearance quality of welds; 8. Fill out the weld seam inspection certificate; 9. Clean up the work site.	The person performing this task must be able to explain the following principles: 2.1 Principles for selecting welding process parameters for horizontally fixed welding for butt-welding low carbon or low alloy steel pipes; 2.2 Key points for assembly operation and positioned welding requirements for horizontally fixed joint for butt-welding low carbon steel or low alloy steel pipes; 2.3 Key points for welding operations of horizontally fixed joint welding for butt-welding low carbon or low alloy steel pipes; 2.4 Control valve butt welding deformation process measures; 2.5 Weld seam appearance quality inspection standards. 3.0 Theories The person performing this task must be able to explain the following: 3.1 Specific content of welding patterns and symbols; 3.2 Weldability of low carbon steel and low alloy steel; 3.3 Underpinning knowledge of welding power supply; 3.4 Metallurgical characteristics of welding; 3.5 Circumstantial knowledge of welding wire and welding shielding gas; 3.6 Key points regarding welding stress and deformation; 3.7 Classification requirements of welding defects. 4.0 Essential Skills 4.1 Teamwork skills; 4.2 Report writing skills; 4.3 Learning skills.
DESCRIPTION OF THE END PRODUCT / SERVICE:	The welding of horizontally fixed joint for butt-welding low carbon steel or low alloy steel pipes using gas metal arc welding is completed in accordance with the technical requirements or relevant quality standards.
CIRCUMSTANTIAL KNOWLEDGE:	Detailed knowledge about: 1. Occupational health and safety; 2. Safety operation of gas metal arc welding power supply; 3. Safety operations of electric or pneumatic tools.

OCCUPATION	WELDING TECHNICIAN	OCCUPATION CODE	
DUTY TITLE	HORIZONTAL AND VERTICAL MANUAL TUNGSTEN INERT GAS WELDING	DUTY NO.	604
TASK TITLE	MANUAL TUNGSTEN INERT GAS WELDING OF LOW CARBON STEEL OR LOW ALLOY STEEL PIPES WITH HORIZONTAL ROTATION FOR BUTT JOINT	TASK NO.	6041
PERFORMANCE CRITERIA	The person performing this task must be able to use manual tungsten inert gas welding method to complete manual tungsten inert gas welding of low carbon steel or low alloy steel pipes with horizontal rotation for butt joint, in accordance with the quality inspection standards for the butt joint welding of steel plates.		
RANGE STATEMENT	The task can be performed in the welding workshop under the supervision of senior technicians or welding engineers. The tools and equipment to be used include: 1. Devices: Welding power supply, TIG welding gun, ground clamp, water cooler, rotary table; 2. Tools: Angle grinder, straight grinder, pitsaw file, hammer, ø2.4 tungsten electrode, weld inspection gauge, wire brush; 3. Welding materials: Welding wire (ø2.0, ø2.4, ø3.0); 4. Labor protection articles: Labor protection clothing and safety shoes, masks, welding gloves, KN95 masks, protective goggles, and earplugs.		
EVIDENCE REQUIREMENT			
PRACTICAL PERFORMANCE		UNDERPINNING KNOWLEDGE	
The person performing this task must be able to do the following: 1. Obtain the task sheet for pipeline horizontal rotary welding; 2. Analyze the requirements of the task sheet; 3. Collect the required welding materials; 4. Confirm that the welding materials have the necessary quality inspection certificates; 5. Check the welding equipment; 6. Check pipe specifications and models; 7. Collect the necessary tools for cleaning the welds; 8. Clean the pipes with the cleaning tools; 9. Use a weld inspection gauge for self-check after welding;		Detailed knowledge about: 1.0 Methods The person performing this task must be able to explain how to: 1.1 Collect the welding materials; 1.2 Turn on the welding power supply; 1.3 Adjust the process parameters of DC arc welding power supplies; 1.4 Conduct pipe butt welding with horizontal rotary motion; 1.5 Conduct welding seam appearance quality inspection; 1.6 Turn off welding power supply; 1.7 Inspect the safety of welding site. 2.0 Principle The person performing this task must be able to explain the following principles: 2.1 Principles for selecting welding process parameters of pipe butt welding with horizontal rotary motion;	

10. Contact the specialized inspection personnel to check the quality of the welds; 11. Contact the scheduling personnel to complete the transfer of the product pipes; 12. Archive the task sheet; 13. Clean the tools, equipment and the workplace; 14. Store tools and equipment; 15. Conduct pipe joint welding.	2.2 Key points for full penetration welding of horizontal rotary pipe joint; 2.3 Key points of operation for pipe butt welding deformation process measures. 3.0 Theories The person performing this task must be able to explain the following: 3.1 Precautions for the representation of weld symbols; 3.2 Selection requirements for welding materials; 3.3 Weldability standards for low carbon steel or low alloy steel pipes; 3.4 Classification and qualitative methods of welding defects. 4.0 Essential skills 4.1 Teamwork skills; 4.2 Report writing skills; 4.3 Learning skills.
DESCRIPTION OF THE END PRODUCT / SERVICE:	The welding of manual tungsten inert gas welding of low carbon steel or low alloy steel pipes with horizontal rotation for butt joint is completed in accordance with the technical requirements or relevant quality standards
CIRCUMSTANTIAL KNOWLEDGE:	Detailed knowledge about: 1. Foundations of occupational health and safety; 2. Safety operation of welding equipment; 3. Safety operations of electric or pneumatic tools.

OCCUPATION	WELDING TECHNICIAN	OCCUPATION CODE	
DUTY TITLE	BRAZING OF LOW CARBON STEEL	DUTY NO.	606
TASK TITLE	INDUCTION BRAZING OF LOW CARBON STEEL PLATES	TASK NO.	6063
PERFORMANCE CRITERIA	The person performing this task must be able to operate the induction brazing of low carbon steel plates in accordance with technical requirements and quality standards.		
RANGE STATEMENT	The task can be performed in the welding workshop under the supervision of senior welding technicians or welding engineers. The tools and equipment to be used include: 1. Induction brazing power supply, induction coils, and supporting equipment; 2. Protective gases; 3. Filler metals, fluxes, anti-flow agents; 4. Workpiece clamps, assembly workbenches, workpiece fixing fixtures, welding workbenches; 5. Weldment cooling liquid; 6. Joint cleaning testing reagents and solutions; 7. Steel wire brushes, grinders for surface cleaning of workpieces and joints; 8. Magnifiers and other appearance inspection tools; 9. Personal protective equipment such as safety shoes, goggles, gloves, and work clothes.		
EVIDENCE REQUIREMENT			
PRACTICAL PERFORMANCE		UNDERPINNING KNOWLEDGE	
The person performing this task must be able to do the following: 1. Observe the health and safety prevention measures; 2. Select appropriate tools, equipment, fixtures, filler metals, fluxes, anti-flow agents, and protective gases; 3. Inspect the safety of equipment, tools, and fixtures used; 4. 4. Conduct surface cleaning, assembly, and fixing of workpieces for brazing; 5. Pre-set and add filler metals and fluxes; 6. Perform operations such as induction heating, insulation, cooling, etc.; 7. Clean welded joints; 8. Carry out self-check of		Detailed knowledge about: 1.0 Methods The person performing this task must be able to explain how to: 1.1 Select welding equipment, tools, fixtures, and protective gases; 1.2 Execute welding operations in accordance with process documents; 1.3 Clean and maintain workpieces after welding; 1.4 Carry out self-check of appearance quality of joints. 2.0 Methods The person performing this task must be able to explain the following principles: 2.1 Selection principles for workpiece assembly and brazing clearance; 2.2 Principles for selecting induction current frequency, filler metals, fluxes, anti-flow agents, protective gases, etc.	

appearance quality of joints; 9. Clean the tools, equipment and workplace; 10. Arrange and store the tools and equipment.	3.0 Theories The person performing this task must be able to explain the following: 3.1 Methods for safety inspection of equipment, tools and clamps; 3.2 Process essentials for induction brazing of low carbon steel plates; 3.3 Operating methods for induction brazing of low carbon steel plates; 3.4 Cleaning method for induction brazing joints of low carbon steel plates; 3.5 Circumstantial knowledge related to self-check of surface defects and appearance quality of welded joints. 4.0 Essential skills 4.1 Communication skills; 4.2 Customer service skills; 4.3 Teamwork skills; 4.4 Interpretation skills for process documents; 4.5 Entrepreneurial skills; 4.6 Learning skills.
DESCRIPTION OF THE END PRODUCT / SERVICE:	Induction brazing is used in accordance with technical standards and customer requirements.
CIRCUMSTANTIAL KNOWLEDGE:	Detailed knowledge about: 1. Occupational health and safety protection; 2. Environmental protection; 3. Radiation protection; 4. Circumstantial knowledge related to electromagnetic induction.

TABLE 1: DACUM CHARTS FOR WELDING TECHNICIAN - NTA 6

DUTIES	TASKS	ENABLERS
1.0 Detection of welding defects	1.1 Analysis of welding defects.	General skills and knowledge • Cooperation with others using communication skills and report to the superiors • Health and safety prevention knowledge • Interpretation of welding inspection-related standards • Identification of welding defects • Cleaning of tools, equipment and workplace • Proper storage of tools and equipment Tools and equipment • Machines for tensile, bend, impact, and hardness tests • Polishing machines • Metallographic microscopes • Visual inspection equipment and instruments such as welding inspection rulers, magnifiers, endoscopes • X-ray sets, film viewers, safety lamps, darkrooms and supporting equipment, darkroom processing reagents • Ultrasonic detectors, test blocks • magnetic particle testing flaw detectors, magnetic particles or suspensions, standard test pieces and test blocks • Penetrant detection equipment and test blocks • Eddy current testing sensors, host machines, and comparative samples • Pressure test media and supporting instruments • Leakage testing medium, supporting instruments • Slides • Intensifying screens • Image quality meters and full set of auxiliary equipment • Safety shoes, goggles, gloves, and work clothes
	1.2 Conventional welding inspection operations.	

DUTIES	TASKS	ENABLERS
		Materials • Welded joints to be inspected • Defect images • Sandpapers • Grinding pastes • Polishing clothes • Corrosion reagents • Film systems • Coupling agents • Penetrant testing agents Requirements for employees • Teamwork spirit • Integrity • Pursuit of excellence • Attention to detail • Time management • Emphasis on commitment
2.0 Manual Shielded Metal Arc Welding (SMAW) of vertical butt joint	2.1 Butt welding of low carbon steel or low-alloy steel plates.	General skills and knowledge • Cooperate with others using communication skills and report to the superiors • Identification and interpretation of technical drawings and welding process guides • Skills and knowledge in welding power connection and adjustment • Skill and knowledge in operating pneumatic/electric angle grinders, pneumatic/electric straight grinders, assembly clamps, and fixtures • Skills and knowledge in operating weld appearance testing tools • Welding process, metal materials, electrical basics, mechanical drawing Tools and equipment • Personal protective equipment such as flame-retardant work clothes, insulated safety shoes, splash-proof goggles, safety helmets, welding leather gloves, and head-mounted welding masks • Welding documents such as welding construction drawings and welding process manuals • DC arc welding power supplies such as welding cables, welding tongs,
	2.2 Horizontally fixed welding for butt-welding low carbon or low alloy steel pipes.	
	2.3 Saddle-type full-penetration bevel joint for pipe-to-plate connection welded using shielded metal arc welding with welding electrodes.	

DUTIES	TASKS	ENABLERS
		and ground clamps • Groove cleaning tools, such as electric/pneumatic angle grinders, pneumatic/electric straight grinders, pliers • Auxiliary tools include slag hammers and chisels • Welding rod drying equipment such as welding rod drying ovens and welding rod insulation barrels • Welding seam testing tools such as welding seam testing rulers, steel straightedges, scribes, and marker pens Materials • Welding rods that meet the requirements of welding process guides • Welded sample Requirements for employees • Teamwork spirit • Integrity • Quality consciousness • Time management
3.0 Gas Metal Arc Welding (GMAW) of vertical butt joint with consumable electrode and gas shield	3.1 Gas metal arc welding for vertical butt welding of low carbon steel or low alloy steel plates. 3.2 Horizontally fixed gas metal arc welding for butt-welding low carbon or low alloy steel pipes.	General skills and knowledge • Cooperation with others using communication skills and report to the superiors • Identification and interpretation of technical drawings and welding process guides • Skills and knowledge in welding power connection and adjustment • Skills and knowledge in the safe use of welding protective gas, gas cylinders, and pressure gauges • Skill and knowledge in operating pneumatic/electric angle grinders, pneumatic/electric angle grinder and straight grinders, assembly clamps, and fixtures • Skills and knowledge in operating weld appearance testing tools • Welding process, metal materials, electrical basics, mechanical drawing

DUTIES	TASKS	ENABLERS
		Tools and equipment • Personal protective equipment such as flame-retardant work clothes, insulated safety shoes, splash-proof goggles, safety helmets, welding leather gloves, and head-mounted welding masks • Welding documents such as welding construction drawings and welding process manuals • Gas shielded welding power supply, such as welding cables, welding guns, ground clamps • Groove cleaning tools, such as electric/pneumatic angle grinders, pneumatic/electric angle grinders, pliers • Auxiliary tools include slag hammers and chisels • Welding seam testing tools such as welding seam testing rulers, steel straightedges, scribes, and marker pens Materials • Welding wire that meets the requirements of welding process guides; welding protective gas; • Welded sample Requirements for employees • Teamwork spirit • Integrity • Quality consciousness • Time management
4.0 Horizontal and vertical manual tungsten inert gas welding	4.1 manual tungsten inert gas welding of low carbon steel or low alloy steel pipes with horizontal rotation for butt joint.	General skills and knowledge • Use of communication skills to work with others • Use of welding quality system • manual tungsten inert gas welding skills for plate and pipe butt joints • Safe handling of argon cylinders • Safety operation of welding • Interpretation of welding symbols • Metal material properties • Qualitative determination of welding defects
	4.2 Vertical fixed manual tungsten inert gas welding of low alloy steel pipes for butt joint.	
	4.3 manual tungsten inert gas welding of butt joint for low carbon steel or low	

DUTIES	TASKS	ENABLERS
	alloy steel plates.	Tools and equipment - Labour protection clothing and safety shoes, masks, welding gloves, masks, protective goggles, and earplugs - Weld inspection gauges, steel straightedges - Angle grinder, straight grinder, pitsaw file, hammer, tungsten electrode, weld inspection gauge, wire brush, nozzle cleaner - Welding power supply, TIG welding gun, ground clamp, water cooler, rotary table, argon gas regulator Materials - Welding wire - Argon Requirements for employees - Teamwork spirit - Integrity - Time management - Emphasis on commitment
	4.4 manual tungsten inert gas welding for stainless steel plate butt welding.	
5.0 Gas welding in all positions	5.1 Vertical fixed gas welding for low alloy steel pipes.	General skills and knowledge - Use of communication skills to work with others - Use of welding quality system - Safe handling of gas cylinders - Manual gas welding skills for plate and pipe butt joints - Safety operation of welding - Interpretation of welding symbols - Metal material properties - Qualitative determination of welding defects Tools and equipment - Labor protection clothing and safety shoes, masks, welding gloves, KN95 masks, protective goggles, and earplugs - Weld inspection gauges, oxygen cylinders, acetylene cylinders, welding guns, oxygen hoses, acetylene hoses, rotary tables, oxygen pressure regulator, acetylene
	5.2 Horizontally fixed gas welding for low alloy steel pipes.	
	5.3 45° fixed gas welding of low alloy steel pipes.	

DUTIES	TASKS	ENABLERS
		pressure regulator - Angle grinder, straight grinder, pitsaw file, hammer, tungsten electrode, weld inspection gauge, wire brush, nozzle cleaner Materials - Welding wire - Flux - Oxygen - Acetylene Requirements for employees - Teamwork spirit - Integrity - Time management - Emphasis on commitment
6.0	6.1 Brazing of low carbon steel plates joining/overlapping in a flame	General skills and knowledge - Cooperate with others using communication skills and report to the superiors - Health and safety prevention knowledge - Interpretation of brazing process documents - Quality inspection of welded joint - Cleaning of tools, equipment and workplace - Proper storage of tools and equipment Tools and equipment - Torch - Assembly workbenches - Metallographic microscopes - Workpiece fixing fixtures - Welding workbenches - Brazing furnace - Workpiece clamps - Induction brazing power supply - Induction coils - Supporting equipment for induction brazing Materials - Combustible gases - Combustion-supporting gases - Protective gases
	6.2 Brazing of low carbon steel plates joining/overlapping in a furnace.	
	6.3 Induction brazing of low carbon steel plates.	

DUTIES	TASKS	ENABLERS
		• Filler metals • Brazing flux • Anti-flow agents • Weldment cooling liquid • Joint cleaning testing reagents and solutions • Wire brushes • Grinders • Magnifiers • Safety shoes • Goggles • Gloves • Work clothes Requirements for employees • Teamwork spirit • Integrity • Pursuit of excellence • Attention to detail • Time management • Emphasis on commitment
